

REACH REGISTRATION OF PRODUCTS

Following to several requests from our customers, we have performed an evaluation of the necessity of a REACH registration of our products. From our knowledge of this European legislation, supported also from the opinion of several of our most relevant suppliers, we can state as follows.

Sections produced by Montanstahl, using production technologies at our disposal (hot rolling, cold drawing, laser welding ...) can be defined as “Articles” in the REACH terminology.

Taking in account that:

- The material in form of alloyed metal can give no place to release of any of its components
- The chemical composition of the raw material is not modified from our production process

We can consider the REACH registration (and relative pre-registration) of our product as not necessary.

Clearly, we will review our position in case of evidence that our evaluation is not correct or incomplete.

We can also confirm that our products do not contains substances of very high concern (SVHC) as defined and listed per Article 57 and 58 (ECHA candidate list) of the REACH Regulation.

In case of any other question about this question, please contact me directly.
